ABOUT RAINBOW

The RAINBOW project is funded by EC Erasmus+ programme, under KA3, to support for Policy Reform and the European Policy tools.

European Qualifications Framework (EQF) is a translation grid which links countries qualification systems, acting as an essential tool to make qualification more readable and understandable across different countries.

WHY?

The project arises from:

- Lack of formal procedures for a direct allocation of EQF levels to international qualifications;
- Absence of agreed quality standards for awarding those qualifications.

HOW?

The EWF methodology will be based on:

- Minimum set of learning outcomes and assessment criteria;
- Workload and ECVET credit system;
- Quality assurance principles, mechanisms and criteria for awarding EWF Qualifications.

project-rainbow.eu

RESULTS

Criteria to relate the International Welding Qualifications to the EQF

Proposal for common Quality Assurance principles

EWF methodology for mapping all levels of International Welding Qualifications

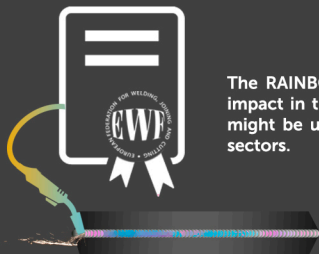

Several qualifications covering EQF level 2 to 7 will be tested and validated with national authorities and stakeholders

Validation report

Dissemination to 30 countries

RAINBOW PROJECT

IMPACT

The RAINBOW project will produce a direct impact in the EWF Qualification System, and might be used for benchmarking with other sectors.
